```
public abstract class Shape {
    private String color="red";
    public Shape() {
}
    public abstract void draw();
    public String getColor(){
        return color;
}
public class Rectangle extends Shape {
@ override
    public void draw();
    System.out.println("Draw"+super.
                                getcolor()+
                                rectangle");
}
}
```

cha

```
public class Circle extends Shape {
  @ override
    public void draw();
      System.out.println("Draw" + super.
                                getcolor() +
                                Circle");
  }
}
// Main
Public class ShapeApp {
  public static void main (String[] args)
  Shape rect = new Rectangle();
   rect.draw();
   System.out.println("___");
   Shap circle = new Circle();
   circle.draw();
  }
}
```
